

How To send logs to syslog server

BrickStor appliance is capable to send system events to centralized syslog server. In order to configure your appliance sending events to such remote syslog server follow the following steps

Step-by-step guide

1. Create configuration file for syslog server

```
vi /etc/rsyslog.d/remote.conf
```

2. Input the following data replacing IP and Port number with your syslog server

For UDP use single @

For TCP use double @@

Example UDP Configuration

```
*.* @192.168.1.123:514
```

Example TCP Configuration

```
*.* @@192.168.1.123:514
```

3. Restart "system-log" service

```
svcadm restart system-log
```
