

# BrickStor won't rejoin a Domain it was previously joined to

## Problem

In some cases your BrickStor will have been joined to a domain and now it is no longer joined to the domain and you are trying to join it again but receive the following error:

```
failed to join domain racktoplabs.com
using AD server: ad-03.racktoplabs.com
Failed to modify the workstation trust account.
Please refer to the service log for more information.
```

## Solution

Delete the computer object in Active Directory for the BrickStor and try rejoining the domain.

\*Remember you need domain admin privileges for both of these steps.
